

Ideation Phase

Brainstorm & Idea Prioritization

Date	22 September 2026
Project Name	Online Complaint Registration and Management System

Brainstorm & Idea Prioritization:

1. Problem Statement Definition

How might we bridge the gap between citizens needing a fast, transparent way to report issues and organizations needing an efficient, trackable, and secure system to manage and resolve those complaints at scale?

2. Brainstormed Idea Groups

- User Interface Features:

React-based single-page interface with role-aware routing for

Users, Agents, and Admins; Bootstrap-driven responsive styling; Axios-based API calls; toast

notifications; and a complaint progress timeline view.

- Secure Infrastructure Features: Stateless JWT-based authentication issued at login/registration, verified by Express middleware for token validation and role-based authorization, with bcrypt-hashed passwords stored in MongoDB.

- Admin & Workflow Features: Central admin dashboard for viewing all complaints, assigning

agents, updating complaint statuses, and viewing summary statistics; automatic complaint closure once a user submits feedback for a resolved complaint.

3. Idea Prioritization Matrix

- High Importance / High Feasibility: JWT authentication with role-based access control (User/Agent/Admin), complaint creation with category and file attachments, status tracking (OPEN → IN_PROGRESS → RESOLVED → CLOSED), admin-driven agent assignment, and post-resolution feedback with 1–5 star ratings.

- High Importance / Lower Feasibility (Future Enhancements): Dedicated agent-facing frontend

interface (backend support already exists), automatic email/SMS notifications on status changes, and intelligent/automatic complaint routing to available agents.
